About Us

At Future Security Systems, we proudly stand as a leading establishment in the communication and security system services industry. Our commitment to excellence is evident through our partnerships with major global corporations, which enable us to provide advanced technological solutions and systems. With a clear vision of the future, our goal is to become one of the foremost institutions specializing in security systems within the Kingdom of Saudi Arabia. This vision aligns seamlessly with the ambitious 2030 vision, and we intend to achieve this through the delivery of high-quality services. By harnessing both local and international expertise, and exceptional skills, and offering a diverse range of security system solutions, we aim to fulfill the aspirations of our clients. We aspire to be a distinguished reference model in providing services locally and regionally. Our relentless pursuit of excellence involves maintaining leadership and authenticity while consistently surpassing our client's expectations in terms of service quality and contributing to the advancement and growth of our community.

Our Vision

At Future Security Systems, our vision is to become one of the foremost institutions in the field of security systems in the Kingdom of Saudi Arabia. We aspire to achievethis by delivering high-quality services with both local and international expertise, exceptional skills, and a diverse range of security system solutions that meet all the aspirations of our clients, in line with the 2030 vision.

Our Mission

Our mission is to establish Future Security Systems as a distinguished reference model in providing services locally and regionally. We are dedicated to maintaining leadership and authenticity while consistently exceeding our client's expectations in terms of service quality and contributing to the advancement and growth of the community.

Security Section

Access Control And Attendance System Devices

Future Security Systems offers a variety of access control systems that can be used in different settings, including hotel doors, security gates, corporate and facility entrances, meeting rooms, financial departments, development teams, home doors, and villas.

We conduct on-site visits to assess the specific needs of each project based on its requirements. Moreover, we can provide a solution that seamlessly integrates access and time management, making the system function as both a security and attendance system. In this field, we offer various technologies such as fingerprint recognition, facial recognition, and smart magnetic card systems.

At Future Security Systems, we aim to deliver a comprehensive solution by linking access control systems with entry and exit devices. Additionally, we incorporate highly secure technologies like fingerprint recognition, facial recognition, and a variety of access control cards. These systems feature internal antennas programmed with employee or user numbers, with a range spanning from 10 to 90 centimeters, and some proximity readers reaching up to 60 meters.

We also provide various types and sizes of smart cards to meet your specific needs.

X

Surveillance Camera Systems

We employ the latest advanced surveillance and camera analysis systems, utilizing various types of cameras such as analog cameras, internet protocol (IP) cameras, long-range cameras, low-light cameras, and high-performance cameras that capture images in infrared.

At Future Security Systems, we ensure that the solutions we provide meet all your current and future security needs under the most challenging conditions. Our offerings are characterized by the highest levels of reliability, competence, and integration. Whether you are looking to enhance your service delivery, start a new project, or upgrade your infrastructure to keep pace with the future, we guarantee the implementation of all integration processes with high efficiency.

Key Features

Remote access and monitoring via the internet or mobile devices from anywhere in the world.

Long-term audio and video recording capabilities.

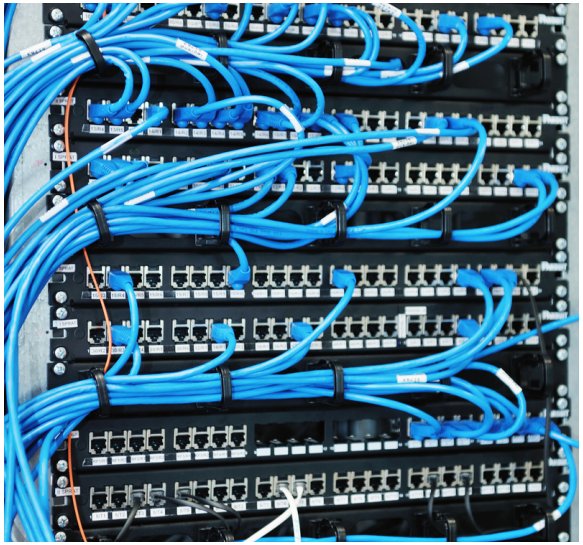
Live monitoring through a display screen or computer, with the ability to split screens according to the number of cameras or in a sequential manner.

Instant notifications in case of any security threats.

Networks

Traditional network services have become insufficient for customers. You need professional services to support and manage your network, allowing you to identify issues before they affect workflow and efficiency. Our recent investments in computer network services and partnerships with several major tech companies enable us to offer the best IT services.

The diverse network solutions we provide at Future Security Systems allow for secure communication and connectivity at any time and from anywhere within your company, both on-site and online. This is achieved by combining core network functions, including routing, security, network optimization, and internet services.



The network management technologies offered by Future Security Systems enable the creation of a smart, integrated network that meets current and future business needs. It ensures secure and unrestricted communication between employees, clients, and resources from anywhere. Network automation simplifies management, enhances security, offers self-sufficiency, and reduces operational costs.

Centralized network management helps protect vital data and information, shielding them from viruses, spyware, and internet attacks more effectively. At Future Security Systems, we provide services for installing various network operating systems, supplying all server and computing devices, implementing network control and user management systems, operating security services with smart battery devices, and providing comprehensive network support.

Telephone System And Central VOIP System

Future Security Systems delivers cutting-edge solutions for visual communication through an integrated central network. Our comprehensive offering includes top-tier phone devices, licenses, and interactive applications, ensuring smooth operations for your business. This system seamlessly connects all branches, providing a robust infrastructure for high-quality and cost-effective local and international calls. With features like softphones for remote accessibility, flexible programming, and user group customization, our solution is tailored to meet the demands of companies with remote employees or multiple branches. Enjoy the convenience of video conferences, internal transfers, and call management from anywhere in the world. Our adaptable system simplifies relocation without specialized assistance. Additionally, calls can be redirected to mobile phones for enhanced privacy and efficiency, while creating a personalized company contact list further optimizes communication.

Key Features

EASILY CONNECT ALL YOUR COMPANY'S BRANCHES TO THE MAIN OFFICE TO ENABLE HIGH-QUALITY VOICE TRANSFER OVER NETWORK PROTOCOLS.

UTILIZE NETWORK LINES INSTEAD OF REGULAR PHONE LINES, AND CONNECT EXTERNAL LINES, UP TO 64 LINES OR MORE.

LINK THE SYSTEM WITH A VOICEMAIL SERVER TO SEND AUDIO RECORDINGS DIRECTLY TO EMAIL. THIS INCLUDES VOICEMAIL MESSAGES FOR INSTANCES WHEN YOU'RE UNAVAILABLE OR RECORDING ALL CALLS.

SPECIAL SOFTWARE FOR THE CALL CENTER SYSTEM ALLOWS YOU TO TRACK OUTGOING, INCOMING, AND MISSED CALLS, AS WELL AS WHO ANSWERED THEM. IT ALSO PROVIDES ADVANCED REPORTING AND PRINTING CAPABILITIES.

Audio Systems

Future Security Systems provides the latest in internal intercom devices by partnering with the world's leading audio system companies, known for their diversity in speakers, amplifiers, and microphones. These secure systems are suitable for installation in places with continuous usage, such as mosques, schools, hospitals, universities, large commercial centers, factories, companies, sports clubs, and residential villas.

Now, you can save yourself the hassle of moving audio devices around your home, office, or any location you frequent. You can control your existing sound sources while in your office through the smart audio systems we offer to meet your needs for comprehensive coverage in all areas. These are integrated audio systems.

Vehicle Tracking Systems

The vehicle tracking system we offer at Future Security Systems operates by sending vehicle information through a tracking device installed in the vehicle. This device contains a GPS receiver that determines the vehicle's location and speed based on specific programming. It then automatically sends this information to the control station of the Integrated Technology Foundation via the cellular network. The received data is displayed on the system's map, and reports about the vehicles can be generated.

Our program allows you to verify the current location of the vehicle, trip details, vehicle speed, and the direction of movement for safety purposes. You can track individuals, vehicles, cranes, generators, or other valuable assets exposed to threats or risks.

Advantages of the Tracking Program

- Secure system access via a username and password
- The program supports multiple tracking devices
- Use of multiple maps
- Various plans to match the client's requirements and budget
- The ability to track the path of a specific vehicle or multiple vehicles
- Checking whether vehicles enter or exit specific areas
- Defining an unlimited number of important locations on the map
- Receiving alerts through email, text messages, or pop-up windows
- Displaying various reports

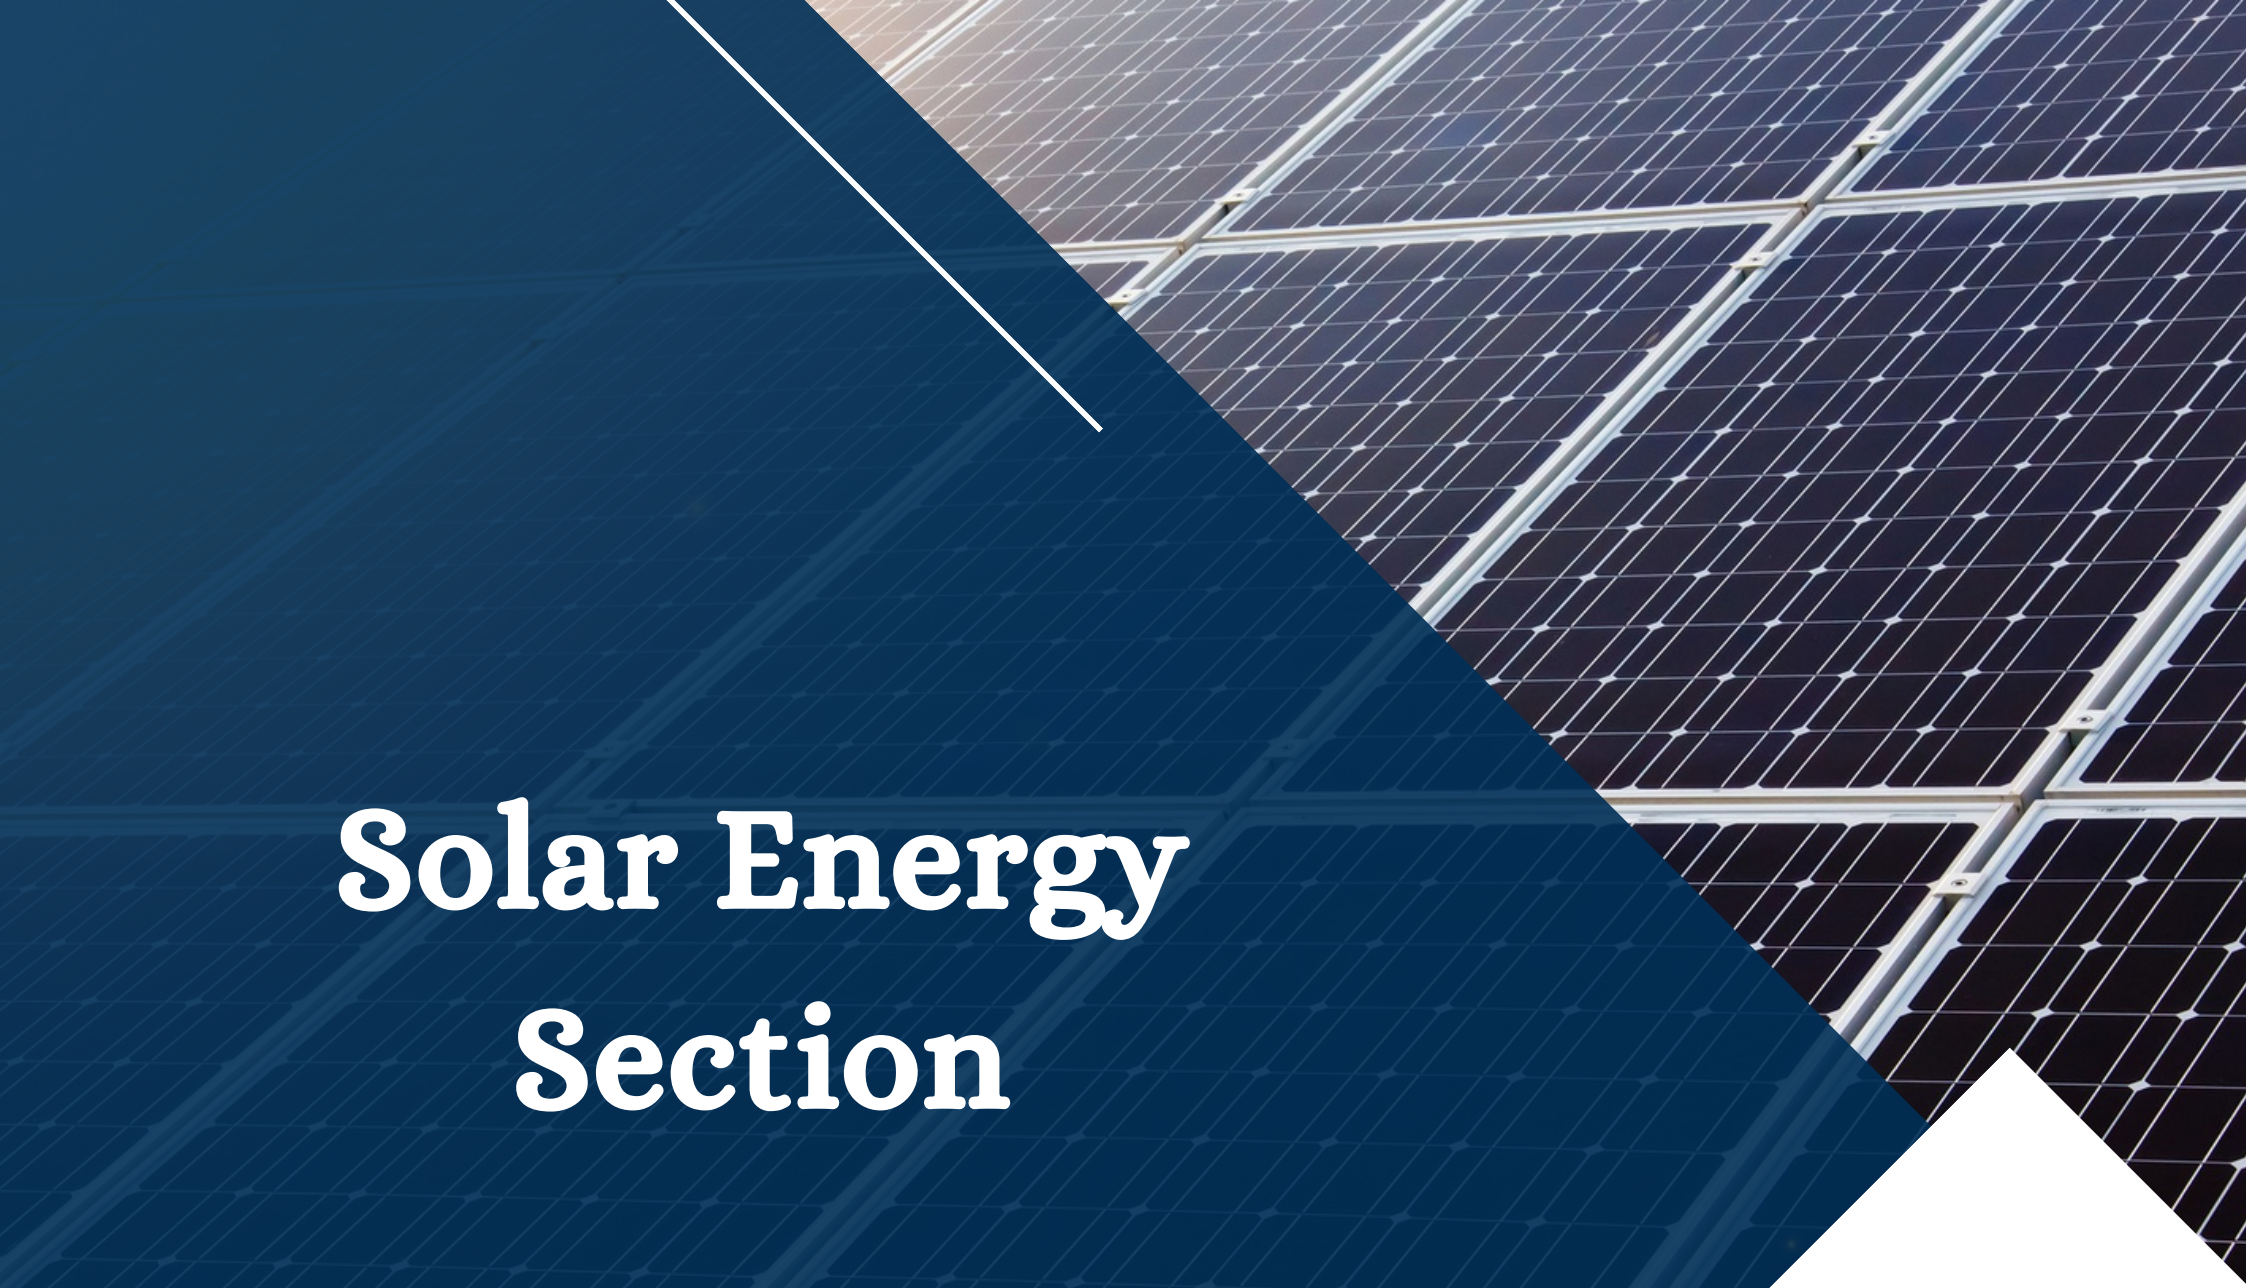
Who Is This System For?

- Sales managers and sales representatives
- Public authorities and law enforcement
- Insurance companies
- School and university student transportation companies
- After-sales service, repair, and maintenance companies
- Fleet managers
- Car rental companies
- Construction and contracting companies
- Land, sea, and river transportation companies

Anti-Theft Alarm Systems

Our security solutions at Future Security Systems include intrusion alarm devices, motion sensors, and control panels, along with integrated equipment for intrusion detection and door security control.

These systems are characterized by a modular design and fully customizable communication methods, tailored to the specific needs of our clients. They seamlessly integrate into their comprehensive security networks through intrusion detection devices.



Solar Energy Section

At the core of our commitment to sustainability lies a cutting-edge solar energy system, revolutionizing how we harness the sun's power. Our state-of-the-art solar panels transcend traditional energy production, aiming to power diverse applications. From illuminating spaces to driving security surveillance systems, our solar panels reshape the landscape of renewable energy. More than an environmental responsibility, our dedication to solar energy signifies a transformative approach to energizing all systems dependent on electrical energy.

Embark on a journey toward efficiency and eco-conscious energy solutions with our solar power system. Comprising solar panels, electrical regulators, backup batteries, and mounting poles, our system stands as a testament to seamless integration and client-centric adaptability. Recognizing the unique needs of each client, our approach allows us to tailor every component, ensuring a perfect fit for diverse applications. Whether enhancing security surveillance or sustainably powering various electrical systems, our solar power system is your gateway to a future where innovation and environmental responsibility coexist harmoniously.

Solar-Powered Cameras

Step into the future of surveillance with our cutting-edge solar-powered cameras. These state-of-the-art devices combine advanced technology with environmental consciousness, offering a holistic approach to security. From monitoring expansive outdoor spaces to providing an eco-friendly solution, our solar-powered cameras redefine the possibilities of modern security infrastructure.

Solar-Powered Lighting

Elevate your security measures with our solar-powered lighting solutions, providing a sustainable and efficient alternative to traditional lighting. Our eco-friendly options seamlessly integrate with diverse applications, enhancing the security of your premises while promoting sustainable energy practices. Experience the transformative impact of our solar-powered lighting as it turns spaces into well-lit, secure environments, ensuring both safety and environmental responsibility.

Advanced Support Systems - Electrical Regulators, Spare Batteries, and Mounting Poles

At the core of our solar solutions, advanced support systems play a crucial role. Electrical regulators optimize energy flow, spare batteries ensure reliable power backup and versatile mounting poles facilitate robust installations. These components are indispensable for ensuring the efficiency of our solar-powered devices.

Maintenance

At Future Security Systems, we offer comprehensive maintenance services, covering all the systems we provide. Our maintenance contracts are tailored to the specific needs of our customers, ensuring the longevity and optimal performance of their security and network systems. We target a diverse clientele, including universities, schools, hospitals, factories, residential and commercial buildings, warehouses, as well as governmental and private sectors. Our maintenance packages include the supply of all necessary spare parts for security devices and network accessories. Our skilled technicians are dedicated to providing prompt and efficient services, ensuring the reliability of security devices, surveillance cameras, alarm systems, and fire alarm systems.

What Makes Us The Right Option?

We collaborate with leading global companies in the field of communications and security systems from various countries around the world.

We have a long-term vision for working in the communications and security systems field, and we are committed to continuous development to prepare for the future. We are dedicated to maintaining performance quality while keeping a close eye on growth and progress. With a steadfast approach and an ambitious vision evolving over the years, our goal is to become the foremost institution in the realm of communications and security systems.
